

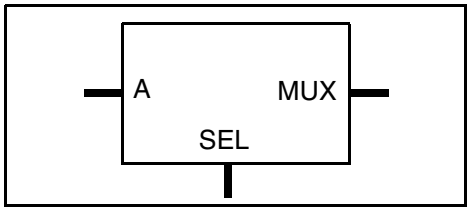
DW01_mux_any

Universal Multiplexer

Version, STAR, and myDesignWare Subscriptions: IP Directory

Features and Benefits

- Parameterized word lengths
- Saves coding time by eliminating the need to code multiplexers (MUX's) explicitly
- Increases design abstraction
- Uses 8-to-1 MUX's where possible



Revision History

Description

DW01_mux_any is an universal multiplexer. This component selects a subrange of the input A, and places it on the output MUX. The select input, SEL, multiplexes the subrange of A to MUX. If necessary, A is padded with high order bits of zero. The widths of the inputs and outputs are fixed by the parameters *A_width*, *SEL_width*, and *MUX_width*.

DW01_mux_any uses 8-to-1 MUX's whenever possible to get the fastest possible implementation with the lowest gate count.

Table 1-1 Pin Description

Pin Name	Width	Direction	Function
A	*A_width*	Input	Data input bus
SEL	*SEL_width*	Input	Select input
MUX	*MUX_width*	Output	Multiplexed data out

Table 1-2 Parameter Description

Parameter	Values	Description
A_width	≥ 1	Word length of A
SEL_width	≥ 1	Word length of SEL
MUX_width	≥ 1	A((SEL + 1) × *MUX_width* – 1 downto SEL**MUX_width*)
bal_str[a]	0 or 1 Default: 0	Controls the symmetric structure of the 'str' implementation. 1 = Use symmetric structure with 'str" implementation.

a. Prior to release 2007.12-SP2, this parameter is ignored.

Table 1-3 Synthesis Implementations

Implementation Name	Function	License Feature Required
str	Synthesis model	DesignWare

Table 1-4 Simulation Models

Model	Function
DW01.DW01_MUX_ANY_CFG_SIM	Design unit name for VHDL simulation
dw/dw01/src/DW01_mux_any_sim.vhd	VHDL simulation model source code
dw/sim_ver/DW01_mux_any.v	Verilog simulation model source code
