Registered Trademarks (®)

Synopsys, AMPS, Astro, Behavior Extracting Synthesis Technology, Cadabra, CATS, Certify, CHIPit, Design Compiler, DesignWare, Formality, HDL Analyst, HSIM, HSPICE, Identify, iN-Phase, Leda, MAST, ModelTools, NanoSim, OpenVera, PathMill, Physical Compiler, PrimeTime, SCOPE, Simply Better Results, SiVL, SNUG, SolvNet, Syndicated, Synplicity, Synplify, Synplify Pro, Synthesis Constraints Optimization Environment, TetraMAX, the Synplicity logo, UMRBus, VCS, Vera, and YIELDirector are registered trademarks of Synopsys, Inc.

Trademarks (™)

AFGen, Apollo, Astro-Rail, Astro-Xtalk, Aurora, AvanWaves, BEST, Columbia, Columbia-CE, Confirma, Cosmos, CosmosLE, CosmosScope, CRITIC, CustomSim, DC Expert, DC Professional, DC Ultra, Design Analyzer, Design Vision, DesignerHDL, DesignPower, DFTMAX, Direct Silicon Access, Discovery, Eclipse, Encore, EPIC, Galaxy, Galaxy Custom Designer, HANEX, HAPS, HapsTrak, HDL Compiler, Hercules, Hierarchical Optimization Technology, High-performance ASIC Prototyping System, HSIM^{plus}, i-Virtual Stepper, ICE, in-Sync, iN-Tandem, Jupiter, Jupiter-DP, JupiterXT, JupiterXT-ASIC, Liberty, Libra-Passport, Library Compiler, Magellan, Mars, Mars-Rail, Mars-Xtalk, Milkyway, ModelSource, Module Compiler, MultiPoint, Physical Analyst, Planet, Planet-PL, Polaris, Power Compiler, Raphael, Saturn, Scirocco, Scirocco-i, Star-RCXT, Star-SimXT, System Compiler, System Designer, Taurus, TotalRecall, TSUPREM-4, VCS Express, VCSi, VHDL Compiler, VirSim, and VMC are trademarks of Synopsys, Inc.

Service Marks (SM)

MAP-in, SVP Café, and TAP-in are service marks of Synopsys, Inc.

SystemC is a trademark of the Open SystemC Initiative and is used under license.

ARM and AMBA are registered trademarks of ARM Limited.

Saber is a registered trademark of SabreMark Limited Partnership and is used under license.

All other product or company names may be trademarks of their respective owners.

Table of Contents

icc_shell	1
-----------------	---

icc_shell

Invokes the IC Compiler command shell.

SYNTAX

icc_shell

```
[-gui [-display terminal_name]]  
[-non_upf_mode]  
[-xp_mode]  
[-psyn_mode]  
[-dp_mode]  
[-f script_file]  
[-x command_string]  
[-no_init]  
[-checkout feature_list]  
[-64bit]  
[-wait wait_time]  
[-timeout timeout_value]  
[-version]  
[-no_log]
```

Data Types

<i>terminal_name</i>	string
<i>script_file</i>	string
<i>command_string</i>	string
<i>feature_list</i>	list
<i>wait_time</i>	integer
<i>timeout_value</i>	integer

ARGUMENTS

-gui

Invokes the IC Compiler graphical user interface (GUI). If you do not invoke it when you start IC Compiler, you can invoke it later by running the **gui_start** command at the icc_shell prompt.

-display *terminal_name*

Opens the GUI on the specified display. By default, the GUI opens on the display specified by the **DISPLAY** environment variable.

-non_upf_mode

Invokes IC Compiler in non-UPF mode.

-xp_mode

Invokes the IC Compiler-XP package.

-psyn_mode

Invokes the IC Compiler-PC package (which does not include routing capability).

-dp_mode
Invokes the IC Compiler-DP package.

-f *script_file*
Executes a file of `icc_shell` commands given in the *script_file* argument before displaying the initial `icc_shell` prompt. If the last statement in *script_file* is **quit**, no prompt is displayed, and the command shell is exited.

-x *command_string*
Executes the `icc_shell` statement given in the *command_string* argument before displaying the initial `icc_shell` prompt. You can enter multiple statements by separating them with a semicolon (;) and enclosing the entire set of command statements in quotation marks ("). If the last statement entered is **quit**, no prompt is displayed, and the command shell is exited.

-no_init
Specifies that `icc_shell` is not to execute any `.synopsys_dc.setup` startup files. Use this option only when you want to include a command log or another script file in order to reproduce a previous `icc_gui` or `icc_shell` session. Include the script file either by using the **-f** option or by invoking the **source** command from within `icc_shell`.

-checkout *feature_list*
Specifies a list of licensed features to check out in addition to the default features checked out by the program.

-64bit
Invokes the 64-bit executable of the IC Compiler command shell.

-wait *wait_time*
Specifies the wait time in minutes. Invoke `icc_shell` only when all of the licensed features specified by using the **-checkout *feature_list*** option can be checked out during the specified time.

-timeout *timeout_value*
Specifies a value from 5 to 20 that indicates the number of minutes the program spends trying to recover a lost contact with the license server before terminating. The default is 10.

-version
Displays the version number, build date, site id number, local administrator, and contact information, and then exits.

-no_log
Disables command file logging for the session and creates a filenames log file in the following format:

<filename>_<pid>_<timestamp>.log.

DESCRIPTION

This command interprets and executes IC Compiler commands. The `icc_shell` environment consists of user commands and variables that control the physical synthesis capabilities of IC Compiler.

The `icc_shell` command executes commands until it is terminated by a **quit** or **exit** command. During interactive mode, you can also terminate the `icc_shell` session by pressing Control-d.
